SUMMARY

Software Engineer with 5 years of production experience at Goldman Sachs and Intuit-Credit Karma. I build backend systems that scale — event-driven pipelines on Kafka and AWS SQS, GCP data infrastructure, and Java/Spring Boot microservices. More recently I've been deep in AI engineering: building a production MCP-based GenAI agent, a LangChain RAG pipeline over 50,000+ records, and an NLP-to-SQL engine. I care about systems that actually work in production, not just demos.

EXPERIENCE

Security Software Engineer

Nov 2024 – Present

Intuit - Credit Karma · San Jose, CA

- Architected the **data layer for a production MCP-based GenAI agent** at Credit Karma. Enabled on-call engineers to resolve GCP access questions in natural language, **cutting average investigation time from minutes to seconds**.
- Built a **LangChain RAG pipeline** over **50,000+** structured access catalog records to power the GenAI agent's query layer. Designed the **chunking strategy, embedding pipeline**, and retrieval logic for accurate, grounded responses.
- Built a **Java/Spring Boot event-driven service** on **AWS SQS** to handle access provisioning during Credit Karma's Workspace migration to Intuit, covering **10,000+ accounts** and syncing **SailPoint entitlement records** to maintain consistent provisioning state.
- Designed an **org-wide GCP IAM data pipeline** in Java and Docker, resolving IAM bindings via the **Cloud Asset API**, joining entitlement exports, and publishing structured access catalog reports to **GCS**, replacing a manual quarterly audit process.
- Built a **Slack notification service** with real-time access request alerts and a self-service Forward Approvals flow for managers, reducing access request turnaround from 2-3 days to a few hours and delivering a **90%+ SLA improvement**.
- Designed **JML lifecycle automation** in Java covering provisioning on hire, role-change updates, and revocation on exit, bringing **3,000 identities across 10 applications** under automated governance and replacing a manual ops process.
- Automated GCP IAM provisioning through a **Terraform Enterprise GitOps** workflow with a full git audit trail supporting **SOX compliance**, and integrated **HashiCorp Vault** to eliminate hardcoded credentials across non-prod pipelines.

Engineering Lead (Founding Engineer)

May 2024 – Nov 2024

Diadem Capital · New York, NY

- Designed and built a **startup-investor matching engine** in Java/Spring Boot backed by PostgreSQL, scoring **100+ variables** per startup to rank recommendations across **5 investor types**, each with a dedicated React dashboard.
- Led a 9-person team building a FinTech platform for **1,700 investors**. Owned microservices architecture, React dashboards, REST API design, and AWS CI/CD pipelines that cut deployment effort by **40%**.
- Built **Salesforce CRM** and document pipeline integrations via **REST webhooks** and batch jobs, eliminating manual data entry from the investor onboarding workflow and syncing deal flow records across the platform.

Senior Software Engineer

Jul 2019 – Sep 2022

Goldman Sachs · Bengaluru, India

- Built an **automated financial reconciliation system** in Java/Spring Boot, consuming trade events via **Apache Kafka** from multiple upstream platforms, processing millions of records daily and cutting reconciliation effort by **75%**.
- Designed Oracle SQL schemas for reconciliation state management and reduced **query execution time by 40%** through targeted indexing, stored procedure rewrites, and query plan analysis.
- Maintained **85%+ test coverage** across 200+ JUnit 5, Mockito, and TestContainers tests with **zero critical regression incidents**, and handled L3 production support for high-priority financial incidents under strict SLAs.

SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, Bash/Shell, PowerShell, BeanShell

Backend: Spring Boot, Spring Security, Spring Data JPA, REST APIs, Microservices, Event-Driven Architecture, Apache Kafka, Redis, RabbitMQ, Webhooks, Node.js

Cloud & Infra: AWS (EC2, S3, Lambda, SQS, RDS, IAM) | GCP (Cloud Run Jobs, Cloud Asset API, GCS) | Terraform, Docker, Kubernetes, GitHub Actions, CircleCI, HashiCorp Vault

Databases: PostgreSQL, MySQL, Oracle SQL, MongoDB, BigQuery; schema design, query optimization, stored procedures, JDBC

AI / ML: LangChain, RAG, Amazon Textract, NLP, FastAPI, MCP (Model Context Protocol), vector search, data pipeline design

Auth & Access: SailPoint IIQ, Okta, OAuth 2.0, OIDC, SAML, RBAC, SOX compliance

Testing: JUnit 5, Mockito, TestContainers, integration testing, Agile/Scrum, System Design

PROJECTS

Automatic Grader

Python · FastAPI · Amazon Textract · React · MongoDB · AWS

- AI-powered grading platform used in production by SJSU professors. Processed handwritten exams with **Amazon Textract**, graded against a rubric, and generated **per-student reports**. Built on Python/FastAPI, AWS Lambda, and S3.

SQL-GPT

Python · NLP · React · custom SQL parser

- NLP-to-SQL system combining NLP models with a custom schema-aware SQL parser, letting users query databases in plain English through a React interface. Achieved **20% faster query processing** and **30% lower response time** over the baseline.

EDUCATION

M.S. Software Engineering · San Jose State University, CA

Aug 2022 - May 2024

B.Tech. Computer Science and Engineering · VRSEC, India

July 2015 - May 2019
